~ CONTENTS ~

Chapter 1 - Introduction

Brief History	1.1
Description	1.2
Tips	1.4
Workroom Considerations	1.5
Lighting	1.5
Electrical	1.5
Plumbing	1.5
Sink	1.6
Ventilation	1.6
Ambient Control	1.6
Heating	1.6
Cooling	1.6
Dehumidifying	1.7
Humidifying	1.7
An Outline for Learning the Pt/Pd Process	1.8
Basic Information	1.10
Ready Equipment and Work Room	1.10
Ready Materials	1.10
Ready Stock Solutions	1.11
Study Coating	1.11
Learn the Process	1.12
Learn to Make a Negative and Print	1.12
Photograph and Print	1.12
Further Study	1.12

Chapter 2 - Cautions

Safety	2.1
--------------	-----

ACIDS	2.1
SOLVENTS	2.1
OXIDIZERS	2.2
POISONS	2.2
ULTRA-VIOLET LAMPS	2.3
OTHER	2.3
Hazard Ratings and Storage Recommendations	2.5

Chapter 3 - Negative Control

Sensitometry	3.1
Simultaneous Exposure and Development Control	3.3
Making a Rough Matrix	3.3
Evaluating the Rough Matrix	3.7
Fine Tuning the Matrix	3.8
Evaluating the Fine Tuned Matrix	3.9
Normalization with The Matrix	3.11
Evaluation with The Matrix	3.12

Chapter 4 - Equipment

Notebooks	4.1
Safe Light	4.4
Positioning the Lamp	4.4
Measuring Equipment	4.5
Solid Measure	4.5
Liquid Measure	4.5
Droppers	4.6
Calibrating Droppers	4.6
Accessories	4.6
Storage Equipment	4.7
General	4.7
Coating Solutions	4.7
Developers	4.7
Clearing Baths	4.7
Other	4.7
Contact Printing Frame	4.8
Light Source	4.9
Sun	4.9
UV Lamps	4.9
Sun vs UV Lamps	4.11
Processing Equipment	4.12

Chapter 5 - Raw Materials

Chemicals	5.1
Coating Chemicals	5.1
Sensitizer	5.1

Sensitizer Additives	5.2
Metal Salts	5.2
Salts	5.3
Contrast Agents	5.3
Processing Chemicals	5.4
Developers	5.4
Clearing Agents	5.5
Other Chemicals	5.6
Preparing Ferric Oxalate Powder	5.7
Substrates	5.8
PAPER	5.8
FABRIC	5.9
Paper Info	5.11
Descriptions of papers	5.12

Chapter 6 - Chemistry

Formulae	6.1
Process Equations	6.3
Process Equations for Ferric Oxalate	6.3
Process Equations for Ammonium Ferric Oxalate	6.4
Formulas for Ferric Oxalate Sensitizer Solutions	6.5
FO Sensitizer Formula Calculator (requires a JavaScript capable browser)	
Optimized Formulas for Metal Solutions	6.7
Metal Solution Formula Calculator (requires a JavaScript capable browser)	
Quick Formula Table	6.9
Making a Percent Solution	6.10
Weighing Out Dry Chemicals	6.12
Preparing the Stock Solutions	6.14
Sensitizer Solutions	6.14
Contrast Agents	6.14
Metal Solutions	6.15
Developers	6.15
Clearing Agents	6.15
Modifying an Existing Solution	6.19
To make a solution STRONGER	6.19
To make a solution WEAKER	6.20

Chapter 7 - Coating

The Coating	7.1
Coating Equipment	7.2
Preparation Equipment	7.2
Brushing Equipment	7.2
Drying Equipment	7.3
General Equipment	7.3
Preparing the Coating Solution	7.5
Coating Components	7.5

Sensitizer	7.5
Metal Solution	7.6
Pt/Pd RATIOS	7.6
Double Salts of Palladium	7.6
Contrast Agent	7.7
Potassium Chlorate	7.7
Hydrogen Peroxide	7.7
Potassium Dichromate	7.7
Ammonium Dichromate	7.7
Na ₂ PtCl ₆	7.7
Mixing the Coating	7.8
Coverage	7.8
General Expectations	7.9
Keeping Notes	7.9
Coating Efficiency	7.11
Explanation of Coating Efficiency	7.11
Measurement of Coating Efficiency	7.11
Calculation of Coating Efficiency	7.12
Coating Coverage	7.13
Definition of Coverage	7.13
Coverage Example	7.14
Some Coverage Values	7.14
Coating Paper	7.17
Preparation	7.17
Humidification	7.17
Brushing	7.18
Drying the Coating	7.19
Drying steps for DOP	7.20
Drying steps for POP	7.20
Coating Fabric	7.22
Preparation	7.22
Brushing	7.22
Drying	7.23
Drying steps for DOP	7.23
Drying steps for POP	7.24
Drying the Coating	7.25
Quasi Multi-Coating Method	7.26

Chapter 8 - Exposure

Loading The Contact Frame	8.1
Exposing	8.3
Exposure by Direct Sunlight	8.3
Exposure by Sunlight, but in Shade	8.4
Exposure by an Artificial UV Source	8.4
Printout Evaluation	8.5
DOP Printout	8.5

POP Printout	8.5
--------------------	-----

Chapter 9 - Processing

Developing	9.1
Procedure	9.1
Notes & Considerations	9.1
Disposal of Acid Developers	9.2
Clearing Recommendations	9.3
Clearing Procedure	9.4
Disposal of Acid Clearing Baths	9.5
Drying	9.6

Chapter 10 - Optional Processing

Brightening	10.1
-------------------	------

Chapter 11 - Finishing

Spotting	11.1
Etching	11.2
Whiteout	11.2
Matting	11.3

Chapter 12 - Building Analog Negatives

General Description	12.1
Equipment	12.4
Film	12.5
BASE FILM	12.5
MASK FILM	12.5
Processing Chemistry	12.6
Building the Positive and Shadow Mask	12.7
MAKING THE POSITIVE	12.8
MAKING THE SHADOW MASK	12.8
Building the Negative and Highlight Mask	12.9
MAKING THE NEGATIVE	12.9
MAKING THE HIGHLIGHT MASK	12.10
Manipulations	12.11

Chapter 13 - Building Digital Negatives

Building Digital Negatives	13.1
Introduction	13.1
Considerations	13.1
Resolution	13.1
Ink Density	13.1
Registration	13.2
Posterization	13.2
Calibration:	13.2

Boundary Conditions	13.3
Resolution	13.3
Methods	13.4
Stack Method	13.5
Multiple or Tri-Negative Method	13.5
Comparison of Methods for producing Digital Negatives	13.5
Stack Method	13.7
PROCEDURE	13.7
Software Manipulation	13.10
Normalization	13.11
Color Mixing	13.12
Standard Curve Adjustment	13.13
Optional Creative Control	13.14
Pt/Pd Printing	13.15
CALIBRATION PROCEDURE	13.16
Color Mix Calibration	13.17
Maximum Black Calibration (1st of 2 parts)	13.19
Maximum White Calibration	13.20
Maximum Black Calibration (2nd of 2 parts)	13.22
Base Curve Calibration	13.23
Appendices to Building Digital Negatives	13.31
Building Density Steps	13.31
Building a Gradient	13.32
Optimizing the Original Negative for Scanner Noise	13.33
Puddling	13.37
Registration	13.38
Resolution	13.40
Sharpening	13.42

Chapter 14 - Testing

Testing the Ferric Oxalate	14.1
Fogging Test	14.4
Test for Clearing	14.5

Chapter 15a - Studies

Empirical Verification of the POP Process Equation and Optimization of the Solutions	15.1
PROCEDURE	15.1
SUBSTRATES	15.1
COATING CHEMISTRY	15.1
AMBIENT CONDITIONS	15.2
EXPOSURE	15.2
PROCESSING	15.2
OBSERVATIONS	15.3
EVALUATION	15.3
AFO40 SERIES	15.3

AFO40 vs AFO60	15.3
FO SERIES	15.3
FO vs AFO	15.3
FINDINGS	15.4
THE POP EQUATION	15.4
CONCLUSIONS	15.4
Verification of Metal Solution Optimization	15.5
The Study	15.5
Observations	15.7
General Observations	15.7
Overall Substance and Presence	15.7
Image Color	15.7
Image Graininess of large tonal areas	15.7
Paper Surface	15.8
Speed	15.8
Contrast	15.8
<u>Quasi Multi-Coating Method</u>	15.8
Discussions	15.9
COVERAGE	15.9
THRESHOLD	15.10
QUASI MULTI-COATING	15.10
Further Data and Discussion	15.10
Conclusions and Recommendations	15.11
An advantage of the double Quasi Multi-Coating	15.11
Additional Pondering	15.12
Wet Dry Drying Study	15.13
Ambient Conditions	15.13
Materials and Procedure	15.14
Weighing Data	15.14
Calculations	15.15
Observations	15.16
SOLARIZATION	15.16
PRINTOUT	15.17
PRINT COMPARISONS	15.17
WEIGHT COMPARISONS	15.17
CHEMISTRY CONSUMPTION	15.17
Conclusions	15.18
Threshold for FO solutions	15.19
The Study	15.19
Observations	15.20
Conclusions and Recommendations	15.21
Relative Comparison of FO Powders	15.22
Verification of FO Powder Composition	15.25
Expected Accuracy	15.25
Sample preparation	15.26
Measurement of Specific Gravity	15.27

Equipment	15.27
Preparation	15.27
Procedure	15.27
Measurement and Data	15.28
Analysis	15.29

Chapter 15b - Studies

Study of Oxalic Acid Concentration in the FO Sensitizer	15.31
Observations	15.32
Conclusions	15.32
Study of the Clearing of Pt/Pd Prints	15.33
CRITICAL CONSIDERATIONS	15.33
MATERIALS	15.34
PROCESSING	15.36
IDENTIFICATION & NOMENCLATURE	15.36
OBSERVATIONS	15.37
CONCLUSIONS	15.39
RECOMMENDATIONS	15.39
A Look at Grain in the Film and Details in the Print	15.41

Chapter 16 - Appendices

Preparation of Ferric Oxalate Powder
